Welcome to KNAUER

About KNAUER

Based in Berlin, KNAUER is a medium-sized company that has been serving the sciences since 1962. We develop and manufacture scientific instruments of superior quality for liquid chromatography and other laboratory tasks. The product range includes systems and components for analytical HPLC/UHPLC, preparative HPLC, fast protein liquid chromatography (FPLC), multi-column chromatography/simulated moving bed (SMB), as well as equipment for high-pressure dosing and osmometry.

Sustainability & ecological commitment

We are committed to protect the environment for ourselves and our children. KNAUER contributes to the conservation of a healthy environment by basing our work on an environmental management system according to DIN EN ISO 14001. The KNAUER quality management system according to DIN EN ISO 9001 makes sure that we continuously manufacture products in the best quality possible. As a family business with about 160 employees, KNAUER focuses on sustainability and takes responsibility for our future.

Some of our ecological activities:

- The regular creation of an input and output balance for the determination and evaluation of energy and resource flows
- Environmentally friendly product development, energy-efficient production, and shipping with biodegradable packaging materials and re-usable packaging with local suppliers
- Fixed specifications for the development of new products according to ecological aspects such as low solvent consumption, repairability, and longevity of the products
- Complete modernization of the company building included thermal insulation, new windows, electric blinds, and a green rooftop, which resulted in a 50 % heating energy saving
- 100 % green electricity and generation of solar power with our photovoltaic system on the roof
- Guidelines for business travel from an environmental, economic, and social perspective
- Tips and instructions for clients to reduce solvent consumption during instrument use
- Environmentally compatible working and manufacturing of HPLC instruments and accessories, e.g. by using energy-efficient working equipment and reducing the use of solvents and harmful substances
- A life cycle assessment to optimize the manufacturing process and concentrate on electricity saving components

Sustainability: #KNAUERforFuture

Many KNAUER employees have good ideas for sustainability, and so we all get better together every year. We would like to inspire YOU to implement sustainability in many areas of your company, too. May these short videos keep you entertained and invite you to act! www.knauer.net/sustainable.

Native conditions

Find more information

Finding the best fitting column for your HPLC/UHPLC, GPC or FPLC application always starts with looking closely at the substances you want to analyse or purify.

This flow chart gives you a guideline how to select the right column for your application. Start at the top and follow the decision lines all the way down to find a column recommendation.

More details about KNAUER columns and phases can be found in the Column Product Selection Guide and online:
www.knauer.net/columns

Eurospher II

Eurospher II offers outstanding mechanical and chemical stability. With physical properties very similar to those of Kromasil 100, Eurospher II columns can be used to replace Kromasil® columns, providing excellent peak symmetry for acids, bases, and neutrals.

Compared to Kromasil® 100, Eurospher II has

- nearly the same particle shape
- a lower metal impurity specification
- higher mechanical stability
- comparable selectivity in RP mode (Eurospher II C18 H vs. Kromasil® 100 C18)

Physical properties

Silica gel	ultra pure, > 99.99 %
Metal content	< 10 ppm
Particle size	2 / 3 / 5 / 10 µm (15 / 20-45 µm upon request)
Particle form	spherical
Pore size	100 Å
Specific surface	320 ± 20 m ² /g
Pore volume	0.8 ml/g
Density	430 g/l

Available column dimensions

Recommended application areas

Phase type	non polar	polar	acidic	basic	Chelator	hydroph. retention	shape selectivity	extreme aqueous	pH > 9	LC-MS
C18										
C18 H		good								
C18 P		good	suitable							
C18 A				good						
Phenyl		suitable				suitable				
C8		suitable		good						
C8 A				good						
C4			good	good		suitable				
HILIC										
NH ₂		good	suitable	suitable						
CN			suitable	suitable						
Diol			suitable							
Si					suitable					good

Eurospher II 100 C18 - USP L1

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, endcapped, with 16 % carbon content (~ 50 % endcapping).

Properties

Separation mechanism: Hydrophobic interaction

Key features

High-class HPLC phase perfectly suited to take on routine analyses as well as the most ambitious chromatography tasks, classical C18 phase with ca. 50 % endcapping and resulting 16 % carbon content, outstanding mechanical and chemical stability.

Tip: Never use classical C18 phases with 100 % aqueous mobile phase. The hydrophobic C18 chains will collapse.

Recommended application areas

- acidic, basic and neutral analytes in reversed phase mode, for example sulphonamides
- anabolic steroids
- anti-psychotics
- beta blocker
- sudan dyes
- phenols and preservatives

Eurospher II 100 C18 A - USP L1

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Polar, monomeric C18 (Octadecyl) modification, polar endcapping, with 10 % carbon content (~ 50 % endcapping)

Properties

Separation mechanism: Hydrophobic and polar interaction

Key features

C18 A phase with alternative, more polar selectivity, suited for the use with pure aqueous mobile phases, 50 % endcapping and resulting 10 % carbon content, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

Recommended application areas

Polar endcapped C18 phase for water soluble and polar analytes, 100 % aqueous eluents for analysis of

very polar compounds, basic pharmaceutical ingredients, water soluble vitamins, catecholamines as well as organic acids.

Tip: With an endcapping the influence of non-derivatized silanol groups can be minimized. The endcapping reagent is generally a smaller silane than used for derivatisation. This treatment reduces the unwanted interaction of polar or charged analytes (acids, bases etc.) because the amount of available silanol groups is reduced.

Eurospher II 100 C18 H - USP L1

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, high efficiency endcapping with 17 % carbon content (~ 99 % endcapping)

Properties

Separation mechanism: Hydrophobic interaction

Key features

Unpolar C18 phase with high efficiency endcapping and 17 % carbon content, therewith higher pH stability in the range of 1-12, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

Recommended application areas

Recommended alternative to Kromasil 100 C18, for acidic, basic and neutral analytes in reversed phase mode with extended pH range.

Tip: All analytical KNAUER columns can be used in reversed flow direction for example for cleaning.

Eurospher II 100 C18 P - USP L1

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Unpolar, trifunctional C18 (Octadecyl) modification, high efficiency endcapping, with 20 % carbon content (~ 99 % endcapping)

Properties

Separation mechanism: Hydrophobic and steric interaction

Key features

KNAUER's most unpolar C18 phase, polymeric, high efficiency endcapping of 99 % and 20 % carbon content, higher pH stability in the range of 1-12, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

Tip: Not all C18 phases are comparable! When replacing an existing column, always have a close look at the characteristics like carbon load, pore size and specific surface area.

Recommended application areas

Alternative selectivity to standard C18; stationary phase in Eurospher II C18 family with the highest carbon load; fully endcapped; excellent shape selectivity and pH stability.

Eurospher II 100 C8 - USP L7

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Monomeric C8 (Octyl) modification, standard endcapping, with 10 % carbon content (~ 50 % endcapping)

Properties

Separation mechanism: Hydrophobic interaction (lower compared to C18 phases)

Tip: Column lifetime can be extended by using moderate conditions like temperatures not higher than 45 °C, backpressure below the maximum pressure and a good sample preparation.

Key features

Classical C8 phase, standard 50 % endcapping and 10 % carbon load, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

Recommended application areas

Similar selectivity to C18 phase but less retention due to the lower hydrophobicity; useful for determination of water soluble vitamins, steroids, catecholamines, sedatives etc.

Eurospher II 100 C8 A - USP L7

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Monomeric C8 (Octyl) modification, standard endcapping, with 10 % carbon content (~ 50 % endcapping)

Properties

Separation mechanism: Hydrophobic interaction (lower compared to C18 phases)

Key features

Classical C8 phase, standard 50 % endcapping and 10 % carbon load, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

Tip: Caution! Even for short term storage all buffer solutions have to be rinsed from the column to prevent crystallization effects.

Recommended application areas

Similar selectivity to C18 phase but less retention due to the lower hydrophobicity; useful for determination of water soluble vitamins, steroids, catecholamines, sedatives etc.

Eurospher II 100 Phenyl - USP L11

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Phenyl modification (Phenylpropyl), 12 % carbon content

Properties

Separation mechanism: Pi-Pi Interactions

Key features

Classical phenyl phase with 12 % carbon load, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

Recommended application areas

Alternative selectivity for aromatic and more rarely pi-pi interaction polar analytes or mixtures with varying polarity and aromaticity.

Tip: For UHPLC columns like Eurospher II 2 µm particle size, samples and eluents should be filtered through a 0.2 µm instead of a 0.45 µm membrane filter. Frits at column in- and outlet have smaller pores than classical HPLC columns and block more easily.

Eurospher II 100-2 Phenyl, 100 x 2 mm ID

Eurospher II 100 NH₂ - USP L8

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Amino modification (Aminopropyl)
- 4 % carbon content (without endcapping)

Properties

Separation mechanism: Hydrophilic and ionic interactions

Key features

Multi mode column for RP, NP, HILIC and IC, Aminopropyl modification without endcapping, outstanding mechanical and chemical stability.

Tip: A precolumn can help to protect your analytical column. Especially when working with highly matrix afflicted samples it is highly recommended to use precolumns.

Recommended application areas

Most flexible phase in the Eurospher II family; can be used in three modes: normal phase, reversed phase and ion chromatography mode (weak anion exchanger); different selectivity to the silica packing; in reversed phase mode mainly used for analysis of carbohydrates.

Eurospher II 100 Si

- Ultra pure, spherical high performance HPLC phase based on silica gel
- No modification, no endcapping, with 0 % carbon content

Si-OH
Si-OH
Si-OH
Si-OH
Si-OH

Properties

Hydrophilic interaction

Key features

High-class HPLC phase perfectly suited to take on routine analyses as well as the most ambitious chromatography tasks, outstanding mechanical and chemical stability.

Recommended application areas

Wide range of different applications, i.e. SEC (size exclusion chromatography) but also for normal phase HPLC and HILIC; good choice for analytical and preparative purposes to separate polar compounds.

Tip: Normal phase (NP) stationary phases have been the first phases for chromatography and that is why their properties of polarity were determined as "normal". The stationary phase of a NP column has polar properties and is commonly used with nonpolar solvents as hexane or heptane. The other way round a reversed phase (RP) column has covalent characteristics and is used with more polar eluents, like mixtures of acetonitrile and water.

Eurospher II 100 Diol

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Diol, no endcapping, with 5 % carbon content

Properties

Hydrophilic interaction

Key features

High-class HPLC phase perfectly suited to take on routine analyses as well as the most ambitious chromatography tasks, classical Diol phase without endcapping and 5 % carbon content, outstanding mechanical and chemical stability.

Recommended application areas

Alternative to the silica packing with shorter equilibration time and comparable selectivity; due to the lower activity of these packings it can be also used for SEC-applications.

Tip: The most important column parameters for evaluation are retention time, peak symmetry and theoretical plates. Retention time to prove the reproducibility of measurements. Peak symmetry to estimate how good the column bed is packed (peak symmetry value of 1.0 is optimal). Theoretical plate numbers to determine the effectiveness of the HPLC column.

Most common HPLC modes

HPLC mode	Mobile phase	Stationary phase	Analytes
Separation of small molecules (up to 2000 Da)			
Reversed Phase RP (<200 Å)	Polar (e.g. mixtures from water and acetonitrile)	Nonpolar (e.g. C18)	Mid-polar - mid-nonpolar soluble in polar and aqueous solvents
Normal Phase NP	Nonpolar (e.g. heptan)	Polar (e.g. SiOH)	Nonpolar soluble in nonpolar solvents, insoluble in water
Hydrophilic Interaction Liquid Chromatography HILIC	Polar organic solvents + water	Polar (e.g. SiOH)	hydrophilic and highly polar not retained by RP
Water layer between stationary and mobile phase

Eurospher II 100 CN

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Cyano modification (Cyanopropyl), no endcapping, with 7 % carbon content

Properties

Hydrophobic and hydrophilic interaction

Key features

Classical phenyl phase with 7 % carbon load, outstanding mechanical and chemical stability, suited for analytical as well as semi preparative and preparative applications.

Recommended application areas

For a wide range of application in normal phase mode as well as reversed phase mode (steroids, carbohydrates polar compounds).

Eurospher II 100-5 CN, 250 x 3 mm

Eurospher II 100 HILIC

- Ultra pure, spherical high performance HPLC phase based on silica gel
- Zwitterionic modification: Ammonium - sulfonic acid
- 7 % carbon content

Properties

Separation mechanism: Hydrophilic and weak electrostatic interactions

Key features

Modern HILIC phase with zwitterionic modification on the basis of ammonium- sulfonic acid. Outstanding mechanical and chemical stability.

Recommended application areas

Especially suited for the separation of hydrophilic, polar and ionic analytes which are poorly retained on

reversed phase columns; behavior is the other way round on Eurospher II HILIC compared to RP which makes it an ideal tool to enhance chromatographic separations for these molecules.

Tip: HILIC applications are well-suited for coupling with MS detection. The high organic content of the applied mobile phases are qualified well for evaporation in the MS's ionization source.

Eurospher II Chiral

Based on ultra-high purity silica, the Eurospher II chiral column materials are characterized by high enantioselectivity and loadability.

Available in a wide range of dimensions for analytical, preparative and SMB (simulated moving bed) applications, Eurospher II Chiral columns are the perfect choice for even the most challenging enantioseparation tasks

Since chiral separations are not very well predictable, KNAUER offers a chiral screening service for your samples.

Tip: Some of the most popular eluents for HPLC (such as acetone, chloroform, DMF, DMSO, MEK, toluene, dioxane, ethyl acetate, methylene chloride, pyridine and THF) which may be remaining in your HPLC system, can destroy Eurospher II Chiral AM and OM phases even in small concentrations! It is highly recommended that the HPLC system is flushed with appropriate eluents before the installation of the chiral column.

Chiral selectors

Depending on the analytes, three different chiral selectors are available:

Chiral column	HPLC mode	USP code	Description	Chiral selector
Chiral AM	NP	L51	polysaccharide chiral stationary phase	Amylose-tris-(3,5-dimethylphenylcarbamate)
Chiral AM-R	RP	L51	polysaccharide chiral stationary phase	Amylose-tris-(3,5-dimethylphenylcarbamate)
Chiral OM	NP	L40	polysaccharide chiral stationary phase	Cellulose-tris-(3,5-dimethylphenylcarbamate)
Chiral OM-R	RP	L93	polysaccharide chiral stationary phase	Cellulose-tris-(3,5-dimethylphenylcarbamate)
Chiral NR	NP	n/a	immobilized brush-type phase	p-electron donor- and p-electron acceptor groups
Chiral NR-R	RP	n/a	immobilized brush-type phase	p-electron donor- and p-electron acceptor groups

Characteristics of chiral separations

Eurospher II Chiral NR	Eurospher II Chiral OM	Eurospher II Chiral AM
Analytes need an oxygen at or near the chiral center and additionally an aromatic ring	Highly versatile chiral phase	Highest generality of all Eurospher II Chiral phases
Elution more predictable than with Chiral AM and OM phases	Analyte does not need to carry an aromatic ring	Analyte does not need to carry an aromatic ring
Inversion of elution order is possible	No inversion of elution order possible	No inversion of elution order possible
Very high capacity and thus ideally suited for preparative HPLC	Scale up in the preparative HPLC range is possible	Scale up in the preparative HPLC range is possible
Stable in all common HPLC eluents	Caution! Not stable in all HPLC eluents!	Caution! Not stable in all HPLC eluents!

Eurospher II Chiral AM

- Ultra pure, spherical high performance HPLC phase for enantioseparation of racemates
- Amylose modified silica gel phase with chiral selector

Properties

Silica gel	ultra pure, > 99.99 %
Metal content	< 10 ppm
Particle size	3 µm, 5 µm, 10 µm
Particle form	spherical
Pore size of base material	1000 Å
Chiral selector	Amylose-tris-(3,5-dimethyl-phenylcarbamate) for Chiral AM

Key features

KNAUER offers these chiral stationary phases for two different separation modes: Eurospher II Chiral AM is designed for separations in normal phase (NP) mode, Eurospher II Chiral AM-R for separations in reversed phase mode.

Recommended application areas

Eurospher II Chiral AM columns are able to separate neutral, acidic and basic racemates.

Eurospher II Chiral AM 5 µm, 250 x 4.6 mm ID
Article number: 25EM320E2J

Separation of Metoprolol, (RS)-1-(Isopropylamino)-3-[4-(2-methoxyethyl)phenoxy]propan-2-ol

Eurospher II Chiral OM

- Ultra pure, spherical high performance HPLC phase for enantioseparation of racemates
- Cellulose modified silica gel phase with chiral selector

Properties

Eurospher II Chiral OM is equivalent to Daicel's well-known Chiralcel® OD* phases.

* Chiralcel® OD is a brand name of Daicel Corporation.

Silica gel	ultra pure, > 99.99 %
Metal content	< 10 ppm
Particle size	3 µm, 5 µm, 10 µm
Particle form	spherical
Pore size of base material	1000 Å
Chiral selector	Cellulose-tris-(3,5-dimethyl-phenylcarbamate) for Chiral AM

Key features

KNAUER offers these chiral stationary phases for two different separation modes: Eurospher II Chiral OM is designed for separations in normal phase (NP) mode, Eurospher II Chiral OM-R for separations in reversed phase mode.

Recommended application areas

Eurospher II Chiral OM columns are able to separate neutral, acidic and basic racemates.

Eurospher II Chiral NR

- Ultra pure, spherical high performance HPLC phase for enantioseparation of racemates
- Amylose modified silica gel phase with chiral selector

Properties

Silica gel	ultra pure, > 99.99 %
Metal content	< 10 ppm
Particle size	Eurospher II Chiral NR: 3 µm, 5 µm, 8 µm, 12 µm Eurospher II Chiral NR-R: 8 µm, 12 µm
Particle form	spherical
Pore size of base material	1000 Å

Key features

Eurospher II Chiral NR is an immobilized brush-type phase with very broad generality and complementary selectivity to Eurospher II Chiral AM and OM. In many cases it is similar to Eurospher II Chiral AM or Chiral OM, but much more stable. The Chiral NR selector is covalently bound, so that you can use all HPLC eluents.

Due to its high loadability it is perfectly suited for preparative separations. Both phases can be used in RP and NP mode. Eurospher II Chiral-NR-R shows reversed elution order compared to Eurospher II Chiral-NR caused by the modification with the opposite enantiomeric form of the chiral selector.

Recommended application areas

Eurospher II Chiral NR columns are able to separate analytes with an oxygen at or near the chiral center and additionally an aromatic ring.

Eurospher II Chiral NR 5 µm, 250 x 4 mm ID
Article number: 25DE110E2J

Eurosil Bioselect

Eurosil Bioselect columns for HPLC feature a wide-pore (300 Å) stationary phase and were specifically designed to separate large biomolecules, such as proteins and peptides.

The use of larger pore silica-based bonded phases leads to improvements in resolution, capacity and recovery of proteins and other biomolecules, due to a reduction in size exclusion mechanism and enhanced molecular diffusion rates.

A pore size of 300 Å has become the accepted standard for wide pore silica gels because it has been found to be suitable for a broad range of molecular weight proteins, peptides and oligonucleotides. In general, peptides exceeding approximately 50 amino acids and oligonucleotides greater than 25 residues are preferentially analyzed on 300 Å materials.

Physical properties

Silica gel	ultra pure, > 99.99 %
Metal content	< 10 ppm
Particle size	3 µm, 5 µm, 10 µm (15 µm, 20 - 45 µm on request)
Particle shape	spherical
Pore size	300 Å
Specific surface	90 ± 5 m ² /g
Pore volume	0.8 ml/g
Density	450 g/l

Characteristics

- Eurosil Bioselect columns are available in 4 modifications, useful for a wide range of separation tasks involving large molecules up to 100 000 Da.
- Strict manufacturing procedures ensure a very narrow pore size distribution.
- Interfering anions or heavy metal ions on the silica surface are not present in Eurosil Bioselect columns because only ultra pure silica gel and high quality chemical modifications are employed.

Separation mechanism of Eurosil Bioselect

To separate larger molecules, they need to freely access the interior of the pores of the packing material. Therefore, the analytes' diameter must be smaller than the average pore diameter.

For higher molecular weight solutes, the use of lower pore size materials (60-120 Å) as typically used for the analysis of small molecules may result restricted diffusion in the material's pores and therewith reduced column efficiency.

Modifications

The recommended modification of Eurosil Bioselect depends on the molecular weight of the analytes.

Biomolecules	Eurosil Bioselect
2000 - 5000 Da	C18/C18A
Biomolecules	Eurosil Bioselect
5000 - 20,000 Da	C8
Biomolecules	Eurosil Bioselect
20,000 - 100,000 Da	C4

Eurosil Bioselect 300 C18 - USP L1

- Ultra pure, spherical wide pore HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, endcapped
- 7.5 % carbon content (conventional endcapping).

Properties

Separation mechanism: Hydrophobic interaction

Key features

Eurosil Bioselect 300 C18 has been specifically developed for the determination and purification of peptides, proteins, and oligonucleotides up to MW approx. 5000 Da. The optimized manufacturing process guarantees excellent batch-to-batch reproducibility. The Eurosil Bioselect sorbent is the first choice for biochromatography with silica material.

Column length	2 mm ID		
	Order No.	3 µm ...K181EBG	5 µm ...K181EBJ
150 mm	15B...	15BK181EBG	15BK181EBJ
100 mm	10B...	10BK181EBG	10BK181EBJ
50 mm	05B...	05BK181EBG	05BK181EBJ

Tip: Caused by the larger pore size of 300 Å, Eurosil Bioselect phases are not as mechanical stable as classical silica gel phases with up to 150 Å and should not be used above 200 bar pressure.

Eurosil Bioselect 300 C18A - USP L1

- Ultra pure, spherical wide pore HPLC phase based on silica gel
- Unpolar, monomeric C18 (Octadecyl) modification, endcapped, with 7 % carbon content (hydrophilic endcapping).

Properties

Separation mechanism: Hydrophobic interaction

Key features

Eurosil Bioselect 300 C18A has been specifically developed for the determination and purification of peptides, proteins, and oligonucleotides up to MW approx. 5 000 Da. The optimized manufacturing

process guarantees excellent batch-to-batch reproducibility. The Eurosil Bioselect sorbent is the first choice for Biochromatography with silica material.

Recommended application areas

Hydrophilic and polar biomolecules, peptides, very polar biomolecules separated with 100 % aqueous eluents.

Eurosil Bioselect 300 C4 - USP L26

- Ultra pure, spherical wide pore HPLC phase based on wide pore silica gel
- Unpolar, monomeric C4 modification, endcapped
- 2 % carbon content (conventional endcapping)

Properties

Separation mechanism: hydrophobic and hydrophilic interaction

Key features

Eurosil Bioselect 300 C4 has been specifically developed for the determination and purification of

peptides, proteins, and oligonucleotides up to MW approx. 100 000 Da. The optimized manufacturing process guarantees excellent batch-to-batch reproducibility. The Eurosil Bioselect sorbent is the first choice for Biochromatography with silica material.

Recommended application areas

Hydrophilic biomolecules and especially peptides larger than 10 000- 20 000 Da

Eurokat

High performance polymer phase for the analysis of organic acids, carbohydrates and alcohols. Available in the ionic forms H, Ca, Pb, Na und Ag.

Physical properties

Particle size	10 µm, 25-56 µm
	ca. 8 % (H-Form)
Cross-linkage	ca. 6 % (Ca, Pb, Na-Form) higher cross linkage means smaller pore size
Max. pressure	up to 100 bar
Max. temperature	up to 90 °C

Characteristics

Eurokat high performance polymer phases were especially developed for the separation of organic acids, carbohydrates, alcohols and even complex mixtures of these compounds.

Eurokat is a sulfonated cross-linked styrenedivinylbenzene copolymer available in several ionic forms (H, Ca and Pb). This particular cation exchanger is characterized by an outstanding density of functional groups, making it the ideal choice for your ion exclusion, size exclusion and ligand exchange chromatography.

Choice of chromatographic conditions

The Eurokat stationary phase is designed to be applicable to a wide range of diverse chromatographic conditions. All Eurokat columns can be used at temperatures up to 90 °C with no organic solvents. The best separation of sugars can be achieved using between 60 to 90 °C. To extend separation performance, it is possible to connect up to three columns of Eurokat in series. Eurokat columns require no organic solvents and thus are environmentally friendly.

Stability

Eurokat polymer columns are extremely stable over the whole pH range. This is one striking advantage compared with silica-based phases which have a limited lifetime at pH extremes, especially in the higher pH range. Most importantly, Eurokat phases show extraordinary column lifetime stability and are not affected by aqueous solvents.

Application areas

- Carbohydrates and organic acids in softdrinks and fruit juices
- Sugar substitutes
- Food preservatives
- Dairy products
- Urine analytic (Uric acid, Hippuric acid)
- Monitoring of fermentation processes

Principle of ligand exchange mechanism

Eurokat H - USP L17

- Sulfonated cross-linked styrenedivinylbenzene copolymer phase for the determination of organic acids, carbohydrates and alcohols
- H-form, 8 % cross linkage

Properties

Cation exchanger, extremely long lasting lifetime when correctly handled, best results with aqueous eluents and small amounts of anorganic acids, recommended eluent 0,01 N sulfuric acid, usage of up to 10 % organic content in the mobile phase is possible

Technical Data

Sulfonated cross-linked styrenedivinylbenzene copolymer with 8 % cross linkage in the ionic form H, available in 10 µm particle size, pressure stable up to maximum 100 bar

Recommended application areas

Eurokat H is especially designed for the analysis of organic acids and even complex mixtures of acids, sugars and alcohols as well as sugar alcohols.

Due to a differing separation process we recommend the use of these type of columns only in 8 mm ID or 4 mm ID.

Tip: Eurokat columns are characterized by an extremely long lifetime if handled properly. Especially pressure shocks and organic solvent contents of more than 10 % in the mobile phase should be avoided absolutely.

Eurokat Pb & Ca - USP L34 / USP L19

- Polymer phase for the determination of mono- and disaccharides
- Pb (USP L34) form, 6 % cross linkage

Properties

Cation exchanger, extremely long lasting lifetime when correctly handled, best results with aqueous eluents, recommended eluent is pure deionized water, usage of up to 10 % organic content in the mobile phase is possible

Technical Data

Sulfonated cross-linked styrenedivinylbenzene copolymer with 6 % cross linkage in the ionic form Pb, available in 10 µm particle size, pressure stable up to maximum 100 bar

Recommended application areas

Especially designed for the analysis of small carbohydrates up to DP 4

Tip: Eurokat columns are used at high temperatures. During equilibration it is very important to have an eye on the backpressure and to start with very low flow rates and increase them only slowly and stepwise after the column has adapted to the temperature.

Eurokat Na

- Polymer phase for the determination of sugar oligomers
- Na form, 6 % cross linkage

Properties

Cation exchanger, extremely long lasting lifetime when correctly handled, best results with aqueous eluents, recommended eluent is pure deionized water, usage of up to 10 % organic content in the mobile phase is possible

Recommended application areas

Especially designed for the analysis of sugar oligomers, separates carbohydrates up to DP 8

Tip: Eurokat columns are typically used with 100 % aqueous eluents. For storage, please avoid microbial growth by flushing the Eurokat column with 0.45 µm filtered ultrapure water and storing it at 4 °C.

Technical Data

Sulfonated cross-linked styrenedivinylbenzene copolymer with 6 % cross linkage in the ionic form Na available in 10 µm particle size, pressure stable up to maximum 100 bar

AppliChrom®

AppliChrom® ABOA columns for aqueous SEC, organic GPC, and special applications

- AppliChrom® ABOA StyDiViBe Series GPC-columns for GPC analysis of organic molecules using THF, toluene, chloroform.
- AppliChrom ABOA SuperOH-P Series for aqueous GPC/SEC-analysis of mainly neutral and anionic polymers like heparins, polysaccharides, PEO, PEG,....
- AppliChrom® ABOA DMSO-Phil-P Series for DMSO GPC/SEC analysis (humic substances, UF/MUF-glue, p-NIPA, many polycondensates, protein from pea or leguminosae,...)
- AppliChrom® ABOA DMAc-Phil-P Series for GPC/SEC analysis in DMAc, DMF, NMP. Good for many medium polar substances, polyoxazolines, lignin,...
- AppliChrom® ABOA Cat-Phil-P Series for aqueous GPC/SEC-analysis of special aminic and polycationic polymers like p-DADMAc, PEI/polyethylenimin, chitosan, copolymers with polyaminofunctions, but also useful for polyanions or neutral polymers like heparin or PEO/PEG, dextran or pullulan.

You decide between classical GPC/SEC columns with conventional mixed pore technology or AppliChrom® BPT technology:

Separate oligomers and polymers with the new GPC media line from AppliChrom® BPT synthesis technology for large range, high resolution separations with increased accuracy in calibration (patent pending).

AppliChrom® ABOA SuperOH-P

GPC/SEC columns for biopolymers and aqueous polymers

- Aqueous and highly hydrophilic polymeric base material
- Particle size 7 µm
- Low column bleeding for low detector noise
- Large pore volume for optimal resolution
- Individual pore sizes for individual molecular weight ranges
- Multi-pore technology for a broad range of molecular sizes
- Increased lifetime of GPC/SEC columns by combination of proprietary particle and packing technology

Pore sizes:

Available pore sizes for different molecular weight ranges

Measurement ranges for Applichrom ABOA SuperOH GPC/SEC columns, 300 x 8 mm, measured in water using PEG/PEO-standards: Porosities **100, 200, 300, 400**

AppliChrom® ABOA StyDiViBe-P

GPC columns for GPC analysis of organic molecules using THF, toluene, chloroform

- Organic polystyrene-divinylbenzene copolymer base material of high porosity for high resolution
- Particle size 5 µm
- Low column bleeding for low detector noise
- High purity for eliminating adsorptive effects and get pure GPC combined with high livetime
- Large calibration ranges covering several decades by unique process of BPT-technology
- Range of individual porosities that can be used single or in combination
- GPC range of 100 Da - >10 MDa

AppliChrom® ABOA DMSO-PHIL-P

Optimized for DMSO-GPC applications

- Interactionfree pure GPC/SEC
- Particle size 12 µm
- Easy, reliable and robust GPC/SEC-calibration by dextrans, pullulans et al.
- Low column bleeding for low detectornoise for improved lightscattering or viscosity detection
- 12 µm particle technology for low backpressure
- Large porevolume and optimized mass transfer for polymers giving optimized resolution
- Low costs caused by long lifetimne of column - result of combination of optimized proprietary particle and packing technology

Sepapure®

In protein purification, a combination of different methods is needed for a successful separation. The purity of the wanted biomolecule is increased in three steps:

In the "capture step" the crude biomolecule is extracted from major side products. In the "intermediate step" further contaminations are removed, and the highly pure biomolecule is gained in the "polishing step". For each step a different method and therefore different columns are used.

FPLC Sepapure® columns are dedicated for purification of biomolecules. Sepapure® media for affinity chromatography (AC) and Ion-Exchange chromatography (IEX) is based on Agarose and depending on the specific purification mode functionalized with ligands e.g. Protein A, Ni-NTA or quaternary ammonium (Q). These FPLC media are available packed in 1 ml and 5 ml cartridges or as bulk media.

Physical properties FPLC Sepapure® columns

Resin 100 µm Agarose particles with 4 % or 6 % crosslinking

Flowrate Recommended: 1 CV/ml

pH Stability 3 - 9 long term

Max. pressure 3 bar

Sepapure® Desalting columns are based on Dextran with an exclusion limit of 5 kDa and available in 1 ml and 5 ml cartridges.

Physical properties Sepapure® Desalting columns

Resin 20 - 50 µm Dextran particles

Flowrate Recommended: 1 CV/ml

Exclusion limit 5 kDa

Max. pressure 3 bar

All available bulk media at one glance:

Antibody Affinity Chromatography

FPLC media based on cross-linked agarose beads with a mean diameter of 100 µm.

The FPLC media is functionalized either with Protein A or Protein G ligands for the binding of antibodies or antibody fragments.

Properties:

Sepapure® Affinity media for antibodies or antibody fragments is designed to be used with most aqueous buffer systems. It is long lasting when correctly handled and are compatible with common CIP strategies. All Sepapure® media is stored in 20 % ethanol upon delivery. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

Technical data:

Agarose beads with typical loading ranges of 1 - 30 mg/l (Protein A column) or 1 - 15 mg/ml (Protein G column). The maximum operating pressure the Sepapure® columns should be used at is 3 bar, while the recommended flowrate is 1 CV/ml.

Recommended application areas:

Typically used in the first step („capture“) of an FPLC purification procedure.

Column type	Cartridge

Tag-Affinity Chromatography

FPLC media based on cross-linked agarose beads with a mean diameter of 100 µm.

The FPLC media is functionalized with NTA ligands for His-Tag and glutathione ligands for GST-Tag purifications.

Properties:

Sepapure® Affinity media for recombinantly tagged proteins is designed to be used with most aqueous buffer systems. It is long lasting when correctly handled and compatible with common CIP strategies. All Sepapure® media is stored in 20 % ethanol upon delivery. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

Technical data:

Agarose beads with typical loading ranges of 1 - 40 mg/l (Ni-NTA) or 1 - 10 mg/ml (Glutathione). The maximum operating pressure the Sepapure® columns should be used at is 3 bar, while the recommended flowrate is 1 CV/ml.

Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

Recommended application areas:

Typically used in the first step („capture“) of an FPLC purification procedure.

Ion-Exchange Chromatography

FPLC media based on cross-linked agarose beads with a mean diameter of 100 µm.

The FPLC media is functionalized with different linkers ranging from strong anion exchange ligands to weak cation exchange ligands.

Properties:

Sepapure® Ion-Exchange media is designed to be used with most aqueous buffer systems. It is long lasting when correctly handled and is compatible with common CIP strategies. All Sepapure® media is stored in 20 % ethanol upon delivery.

Technical data:

The agarose beads are functionalized with a quaternary ammonium for the strong anion exchanger (Q) and with diethylaminoethyl for the weak anion exchanger (DEAE). The strong cation exchanger is functionalized with sulphopropyl (SP) and the weak cation exchanger with carboxymethyl (CM).

The maximum operating pressure the Sepapure® columns should be used at is 3 bar, while the recommended flowrate is 1 CV/ml.

Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

Recommended application areas:

Typically used in the intermediate step of an FPLC purification procedure.

Column / Resin type	Cartridge			Media

Size Exclusion Chromatography

FPLC media based on a cross-linked agarose-dextran composite with a mean particle size of 35 µm.

Properties:

Sepapure® Size-Exclusion media is designed for the preparative purification of biomolecules according to their size. They are long lasting when correctly handled and are compatible with common CIP strategies. All Sepapure® media is stored in 20 % ethanol upon delivery.

Technical data:

The Sepapure® Size Exclusion beads have a fractionation range of either 3 - 70 kDa (Sepapure® SEC 75) or 6 - 600 kDa (Sepapure® SEC 200).

The maximum operating pressure the Sepapure® columns should be used at is 3 bar.

Recommended application areas:

Typically used in the final step of an FPLC purification procedure.

Resin type	Media						
	25 ml	50 ml	100 ml	150 ml	250 ml	500 ml	1000 ml

Desalting Columns

FPLC media based on dextran beads with a mean diameter of 20 - 50 µm.

Properties:

Sepapure® Desalting media is designed to be used for removal of small molecules below the exclusion limit and for convenient rebuffering. It is long lasting when correctly handled and compatible with common CIP strategies.

All Sepapure® media is stored in 20 % ethanol upon delivery. Available as prepacked 1 ml or 5 ml cartridge or as bulk material.

Technical data:

The Sepapure® dextran beads have an exclusion limit of 5 kDa. The maximum operating pressure of the Sepapure® columns is 3 bar, while the recommended flowrate is 1 CV/ml.

Recommended application areas:

Typically used in the final step of an FPLC purification procedure or inbetween steps for fast buffer exchange.

Columns for SMB processes

Every SMB set comes with a special text certificate

KNAUER offers purpose-built SMB sets. Additionally to the quality test of every single column, SMB sets are tested for reproducibility to ensure the appropriateness for SMB processes.

For a stable SMB process, a set of identical and robust HPLC columns is essential as in every of the four zones the separation has to be identical to reach a continuous process. It is recommended to order one additional column in a SMB set (needed columns + 1) to have one column with exactly the specifications of the SMB set for determination of the parameters needed for process layout.

The particle size of the separation material should be 15 µm or larger to ensure a robust purification process.

While the stationary phase always depends on the application, the recommended column dimensions are mainly dependent on the amount of sample that must be purified.

Typical parameters for preparative columns

Column dimension	Loadability* compared to analytical 250 x 4 mm column	Recommended flow rate [ml/min]
250 x 4 mm	1 x (analytical reference)	1
250 x 8 mm	4 x	4
250 x 16 mm	16 x	16
250 x 20 mm	25 x	25
250 x 30 mm	56 x	55
250 x 50 mm	156 x	150

* The mass and volume loadabilities always depend on the specific sample and application as well as on the stationary phase filled in the HPLC column. The chart only gives a first clue and can be higher or lower than the given numbers. Scale-up factor (SF) calculation: SF = ID²(preparative)/ID²(analytical)

High flexibility through variable column hardware types

When to use which column hardware solution?

KNAUER offers stationary phases for nearly any application in normal- or reversed phase mode as well as for special purification tasks in ion exclusion and ligand exchange mode for example. Nearly all KNAUER phases are also available in larger particle sizes for easy upscaling to SMB processes.

Additionally, a self packing column station for frequently changing separation task and multiple column use is available.

dAX preparative column hardware

- **Dynamic axial compression** for an extended lifetime
- No formation of void volume at the column inlet possible

Standard preparative column hardware

- **Flanged or standard** threaded
- Without axial compression

Column kits

Eurospher II RP Analytical Column Kit

3 columns with the modifications C18, C18H, C18A for a wide range of reversed phase selectivities.

- C18: Classical Reversed Phase columns for HPLC and UHPLC: Most often used stationary phase in reversed phase mode.
- C18 A or AQ: Columns for polar reversed phase applications with 100 % aqueous mobile phase: C18 stationary phase for the analysis of more polar and hydrophilic compounds in reversed phase mode with hydrophilic endcapping.
- C18 H: Columns for more unpolar analytes in Reversed Phase mode: C18 stationary phase with a special, high efficiency or polymeric unpolar endcapping style, extended pH range pH 1-12.

The column kit is available in different dimensions and particle sizes:

- **Classical HPLC:** 150 x 4 mm ID columns in 5 µm particle size (Order no. A66150RP)
- **High resolution HPLC:** 100 x 3 mm ID columns in 3 µm particle size (Order no. A66100RP)
- **UHPLC:** 100 x 2 mm ID columns in 2 µm particle size (Order no. A66101RP)

Sepapure® Column Kits

Sepapure® IEX Screening Kit (Order no. A66160IEX)

Four different IEX resins in one package ranging from strong cation to weak anion exchangers, to find the best fitting conditions to your separation task.

The IEX Screening Kit contains:

- Sepapure DEAE FF (1 ml)
- Sepapure Q FF (1 ml)
- Sepapure CM FF (1 ml)
- Sepapure SP FF (1 ml)
- Sepapure Desalting (5 ml)

Sepapure® His-Tag Purification Kit (Order no. A66160Ni)

The essential set of columns to purify recombinant His-tagged proteins.

The His-Tag Purification Kit contains:

- Sepapure Ni-NTA FF (5 ml)
- Sepapure Desalting (5 ml)

Column care and use

Equilibration and storage of silica gel based columns like Eurospher II

Proper storage of silica based HPLC columns

Silica based columns should be stored in an aprotic solvent.

Caution! Even for short-term storage, flush out all buffer solution from the column to prevent algal growth. Make sure that all buffers are washed out of the column before exchanging aqueous mobile phases by organic solvents. Buffer salts are not soluble in acetonitrile and can block capillary tubing and the column.

- The best solvent for storage of RP packings (C18, C8,

C4, C1, C30, CN and Phenyl) is acetonitrile/water (50:50 v/v). The water content should not be greater than 50%.

- The best solvent for storage of NP packings (Silica, Diol, Nitro, Cyano and Amino) is hexan/isopropanol 90:10 (v/v).
- The best solvent for storage of columns used in HILIC mode (HILIC, Amino, and Silica) is acetonitrile/water (90:10 v/v) or acetonitrile/5 mM ammonium acetate, pH 5,3 (90:10 v/v). Acetonitrile content should always be greater than 90 %.

Equilibration

The equilibration time of a column depends on the column dimensions. In general, a column is equilibrated after 20 column volumes are flushed through it. The equilibration times for the most important column dimensions are summarized in the following table.

You can reduce the equilibration time by simply increasing the flow rate. However, make sure to flush the column with at least 10-20 column volumes to make sure the column is equilibrated.

Eurospher II columns with 2 µm particle size, UHPLC:

Column dimension (Length x ID) [mm]	Column volume [ml]	Flow rate [ml/min]	Equilibration time [min]
50 x 2	0.11	0.5	3
100 x 2	0.21	0.5	6

Eurospher II columns, classical HPLC:

Column dimension (Length x ID) [mm]	Column volume [ml]	Flow rate [ml/min]	Equilibration time [min]
250 x 4.6	2.82	1.0	28
150 x 4.6	1.69	1.0	17
100 x 4.6	1.13	1.0	12
50 x 4.6	0.56	1.0	6
250 x 4.0	2.14	1.0	22
150 x 4.0	1.28	1.0	13
125 x 4.0	1.07	1.0	11
250 x 3.0	1.20	0.6	20

Column dimension (Length x ID) [mm]	Column volume [ml]	Flow rate [ml/min]	Equilibration time [min]
150 x 3.0	0.72	0.6	12
100 x 3.0	0.48	0.6	8
50 x 3.0	0.24	0.6	4
250 x 2.0	0.53	0.25	21
150 x 2.0	0.32	0.25	13
100 x 2.0	0.21	0.25	9
50 x 2.0	0.11	0.25	5

Regeneration of silica gel based columns like Eurospher II

Regeneration of a column

We recommend regenerating a column if a change in peak form, retention time, resolution or an increase in backpressure is observed.

If the system pressure begins to rise, remove the column and check the system to find whether the pressure increase is being caused by the system or the column. Pressure increase caused by system: flush system, exchange eluent filters, frits and/or blocked capillaries.

Pressure increase caused by column: backflush the column carefully to remove particle buildup from the inlet frit (connect the column outlet to the pump/injector and flush). Do not connect the column to the detector.

If the column still has a high backpressure, flush the column according to the following regeneration scheme.

After the regeneration procedure, re-equilibrate the column with the mobile phase before analyses.

Regeneration scheme

RP columns (C18, C8, C4, C1, C30, CN and Phenyl stationary phases)	NP columns (Silica, Diol, Nitro, Cyano and Amino stationary phases)	Columns used in HILIC mode (HILIC and Silica stationary phases)
20 CV* water	20 CV heptane	20 CV water
20 CV acetonitrile	5 CV isopropanol	30 CV 0.5 M ammonium acetate
5 CV isopropanol	20 CV acetonitrile	30 CV water
20 CV heptane	20 CV water	20 CV acetonitrile/water (50:50 v/v)
5 CV isopropanol	20 CV acetonitrile	20 CV acetonitrile
20 CV acetonitrile	5 CV isopropanol	20 CV acetonitrile/water (50:50 v/v)
	20 CV heptane	

* CV = column volumes

Eurokat column care and regeneration

Column maintenance tips

- The maximum pressure limit during operating should not be exceed 90 bar. The maximum pressure for the column material is 100 bar.
- Forceful mechanical handling (bumps, shocks) as well as sudden temperature changes should be strictly avoided to conserve the homogeneity of the packed column bed.
- Water used in preparation of the mobile phase should be either fresh double-distilled or HPLC-grade.
- All reagents used in sample preparation (solvents, reference compounds, etc.) should be of p.a. grade. Particulate matter and precipitates must be removed from the sample by filtration before injection.
- Changes in column temperature should only be undertaken under continuous eluent flow. As a principle, drastic temperature changes should always be carried out in gradual steps.
- The optimal temperature range for the analysis of carbohydrates is 60 - 90 °C.
- During heating process from room temperature keep the flow low at 0.1 ml/min for 4 mm and 0.2 ml/min for 8 mm columns up to 60 °C.
- Flow rate changes should also only be carried out stepwise.
- Optimal flow rates are typically 0.1 - 0.2 ml/min for 4 mm diameter columns and 0.4 - 0.8 ml/min for 8 mm diameter columns.
- If the column is not to be used for a longer period, the inlet and outlet should be sealed with appropriate blind fittings to prevent the polymer material from drying out. For longer term storage, the column should be kept at 8 °C to avert bacterial growth.

Column regeneration procedure

Eurokat columns can be regenerated in their corresponding ionic form. Regeneration of the polymer resin is important to maintaining the selectivity and lifetime of the column material.

If metal ions or organic components are present in the sample, these materials may settle on the resin material or even react with the polymer, resulting in a gradual loss of column performance. Through periodic cleaning of the column, lifetime and performance can be significantly prolonged.

1. To clean the resin, Eurokat Pb, Ca and Na columns should be flushed for at least 4 hours (preferably overnight) with double-distilled water at a flow rate of 0.2 ml/min (8 mm ID column) in the reverse direction at 60 - 75 °C. Eurokat H columns can be cleaned in a similar manner but require 0.01 N sulfuric acid.
2. The column should then be rinsed for an additional hour with the same cleaning eluent in the normal flow direction at 75 - 85 °C. Maintaining this flow direction and temperature, Eurokat Pb, Ca and Na columns should then be purged with a mixture of 10 % acetonitrile and 90 % water. Eurokat H columns should be purged with 10 % acetonitrile and 90 % 0.01 N sulfuric acid.

Column using tips

- In general it is recommended that a precolumn (30 x 8 mm or 30 x 4 mm) should be used. In order to eliminate undissolved particles or precipitates, the sample should be filtered through a 0.45 µm filter unit. Particulate matter in the eluent is removed by installing a column inlet filter between the injector and the column.

3. After this cleaning process, the column is to be regenerated through purging with following parameters:

Flow rate	0.2 ml/min
ID column	8 mm
Time span	4 - 6 hours
Temp.	75 - 85 °C
Cleaning eluent	Eurokat Pb: 0.25 mol/l lead nitrate Eurokat Ca: 0.25 mol/l calcium nitrate Eurokat Na: 0.25 mol/l sodium chloride or 0.1 mol/l sodium hydroxide Eurokat H: 0.05 mol/l sulfuric acid

4. Once this procedure has been completed, the desired flow rate may be resumed gradually. The column is now ready for further analyses and can be put back into normal use once having gradually reached the working temperature.

- To avoid contaminating the detector's measurement cell, neither the cleaning solution nor the regenerant should pass through the measurement cell.

Notes

Terms and conditions

1. Definition of terms

The following terms and conditions apply to every order received by KNAUER and every delivery of goods. This holds as well in case of contradictory buying conditions of the purchaser. Exceptions are only valid when confirmed by KNAUER in writing. Purchase orders are only binding if confirmed by KNAUER in writing.

2. Payment

Deliveries are due and payable, net, within 30 days of invoice date or in advance. Deductions are not allowed. Foreign deliveries must be paid by irrevocable letter of credit or in advance. All bank and transfer fees must be paid by the customer. The consequences arising out of delay are due to statutory provisions. Payments are due irrespective of an eventual notice of defect, except such defects are evidently justified.

3. Delivery

Delivery dates are not binding unless expressly stated in the contract as binding dates. Delay in delivery requires a written reminder and an adequate additional grace period set by the customer. KNAUER is only liable for claims for damages under the requirements of no. 6.

4. Claims

Condition for any warranty claim is the immediate inspection of the goods upon delivery, and complaint towards and damage assessment together with the carrier, and an immediate written complaint to KNAUER. The complaint must be made within five workdays in case of visible defects or losses.

5. Risk liability

Delivery is made at the customer's own risk. As soon as the goods leave KNAUER's plant the risk of accidental loss, destruction or deterioration passes to the customer.

6. Warranty and damages

6.1. Warranty claims

The warranty begins with receipt of the goods. If commissioning has been ordered, after commissioning. In the case of delayed commissioning, the warranty begins at the latest four weeks after receipt of the goods unless the supplier is responsible for delayed commissioning.

The warranty for osmometers and liquid chromatography instruments is limited to two years, excluding glass breakage, damages due to stoppage and consumable materials such as membranes, light bulbs, columns, bushings, gaskets and valves. KNAUER's liability shall be restricted to the replacement of defective material or repair only. Transportation costs are borne by the customer. In case of failure of replacement or repair the customer may demand a reduction in price or cancellation of the contract with respect to the defective material. The customer has to inspect the goods delivered immediately and shall immediately give written notification of any defects to KNAUER, in case of non-obvious defects within 10 working days after delivery at the very latest.

6.2. Claims for damages

The liability of KNAUER shall be restricted to intentional acts and acts of gross negligence and compensation shall only be due for direct, foreseeable damages. Liability for breach of a material, essential duty of the contract, liability because of personal injury, liability according to the stipulations of the German Law on Product Liability and liability for the lack of the condition of the contract goods guaranteed by KNAUER remain unaffected.

7. Third party rights on industrial or other intellectual property

KNAUER shall not be liable for the infringement of third party rights founded on industrial or other intellectual property caused by the use of the delivered goods. The customer is fully responsible for the products manufactured with the goods. In particular KNAUER is not obliged to indemnify and hold harmless the customer from all claims raised by third parties based on the infringement of their industrial or intellectual property rights by the use of the goods.

8. Property rights

The ownership of the goods shall remain with KNAUER until payment in full for all our claims resulting from our business relation is received. In case of improper treatment of the goods or in case of default KNAUER may demand the return of the delivered goods. This demand entails resignation of the contract only if KNAUER declares it explicitly.

Resellers are allowed to sell the goods to third parties in due course of the business. The customer herewith assigns his resale claims against third parties to KNAUER.

9. Export

Instruments and products delivered by KNAUER may not be exported to a country other than of the customer's headquarters without KNAUER's prior written permission.

10. Place of settlement and court of jurisdiction

The place of performance is Berlin. Proper venue for all claims is the competent local court at KNAUER's principal place of business - Berlin. KNAUER reserves the right to sue the customer at his principal place of business.

This agreement shall be governed by the laws of the Federal Republic of Germany excluding the UN-Convention on the International Sale of Goods (CISG).
